SUMMARY

Web3 backend developer with 3+ years of experience building and shipping smart contracts, NFT marketplace systems, and on-chain/off-chain integration layers.

Hands-on with EVM smart contracts (Solidity, ERC-20, ERC-721, EIP-712), Cardano NFTs (CIP-25), and OP Stack L2 infrastructure research and testnet deployment.

Strong backend foundation (Golang, NodeJS, Python) with a focus on reliability and data integrity - correctness-first pipelines, idempotency, retries, and graceful failure handling.

WORK EXPERIENCE

LCX | SOFTWARE DEVELOPMENT ENGINEER

Gurugram, IN | Aug 2022 - Mar 2026

- Designed LCX Token 2.0 smart contract (ERC-20, upgradeable, with custom features) - live on Ethereum mainnet.
- Conducted research on OP Stack and performed initial testnet deployment of a layer 2 EVM chain, including Golang-based rollup services, smart contract deployments, and on-chain/off-chain component configuration.
- Owned and maintained the backend of Tiamonds (now TotoFinance), an NFT marketplace - including Ethereum smart contracts, Cardano NFTs (CIP-25), and NodeJS, Python services with correctness-first workflows (validation, retries, concurrency aware operations).
- Implemented server-signed message flows (EIP-712) for ERC-721 marketplace operations to reduce on-chain overhead (cut gas costs by approximately 50%) and enable efficient workflows for new features.
- Built a Python automation pipeline (NumPy/Pandas) syncing approximately 80,000 CSV rows into MongoDB for over 20,000 assets with safe retries, and preparing images with Pillow and uploading them to AWS S3.

SKILLS

Languages: Go (Golang), Solidity, SQL, JavaScript, TypeScript, Python

Web3: Ethereum, ERC-20, ERC-721, EIP-712, Cardano (CIP-25), OP Stack, web3.js, ethers.js

Dev Tools: Foundry, Hardhat, Etherscan

Backend: REST APIs, gRPC, NodeJS

Datastores: PostgreSQL, MongoDB, MySQL, Redis

Infra: Docker, Nginx, systemd services, PM2, Git, SSH

Cloud: DigitalOcean (Droplets), AWS S3

EDUCATION

B. Tech. Computer Science and Engineering
BIT Sindri | 9.24 CGPA

JH, IN | 2022

PROJECTS

OP STACK WITHDRAWALS INDEXER

GOLANG, OPTIMISM STACK, BLOCKCHAIN, POSTGRESQL

- Two services (**Indexer** + **API**) with a shared PostgreSQL database, designed for horizontal scalability.
- Failure-safe indexing with retries/backoff, idempotent SQL writes to prevent duplicates, and graceful shutdown.
- Used interfaces to decouple core logic from chain/DB implementations for testability and maintainability.
- Live UI:** <https://op-sepolia-bridge.d-bharti.dev> - built with Lovable and Cursor.

GO PAYMENT APP

GOLANG, MICROSERVICES, MYSQL, gRPC

- Reference microservices-based payment system with clear service boundaries: auth, money movement, email, and ledger.
- Designed service-to-service communication using **gRPC** and MySQL-backed workflows.

- Deployed on local **Kubernetes (Minikube)** using manifests and integrated **Kafka** for asynchronous messaging workflows.

TIC TAC TOE BOLT

Typescript, ReactJS

- An extension of the classic Tic-Tac-Toe, with an additional constraint: max 3 active symbols per player.

COMMUNITY CONTRIBUTIONS

- **Smart Contract Audits**
 - CodeHawks Profile: <https://profiles.cyfrin.io/u/unitedcoolness26>
 - 1 High finding, 2 Low findings - [RAAC Audit](#)
- Open source (**MeshJS**, TypeScript): refactored transaction metadata handling and fixed metadata-loss bug ([PR 416](#)); fixed HD wallet account bug ([PR 396](#)); reported wallet ownership verification issue ([Issue 345](#)).
- Technical articles on **Medium** ([@dharmveerbharti](#)): [Off-chain Signature Workflow](#), [Server-signed Messages in Web3](#).
