SUMMARY

Backend engineer focused on **reliability**, **data integrity**, and **scalability**
Built and owned backend + data systems in Golang, NodeJS, and Python, with production tooling
Strong in **correctness-first pipelines (validation, idempotency, safe retries)** and **clear service boundaries**
Skilled at **collaborating across teams** and **leading feature development from the ground up**

WORK EXPERIENCE

LCX | Software Development Engineer — Gurugram, IN | Aug 2022 - Mar 2026

- Led the backend development of Tiamonds (now TotoFinance), an NFT marketplace
- Built Golang-based OP Stack Withdrawals indexer service with **failure-resilient retries** and **idempotent database writes**
- Built **concurrency-aware REST APIs** and **asynchronous pipelines** and collaborated with the frontend and design teams for feature integration and maintained staging deployments
- Built **retry-safe blockchain monitoring services** to synchronize and update database according to blockchain events
- Conducted research on and implemented **server-signed message flows** for ERC-721 marketplace operations to reduce on-chain overhead (**cut gas costs by approximately 50%**) and to enable efficient workflows for new features
- Built an **automation pipeline** syncing approximately 80,000 CSV rows into MongoDB for over 20,000 assets with safe retries
- Designed NFT marketplace smart contracts supporting **server-signed messages**, and custom ERC-20 tokens

CAREER BREAK — Mar 2026 - Present

- Upskilling to transition into web2-based roles
- Deepening my knowledge in **microservices development**; experimenting with **Claude Code, local LLM (Ollama, Qwen), RAG fundamentals**

SKILLS

Languages: Go (Golang), JavaScript, TypeScript, Python, SQL, Solidity

Backend: REST APIs, gRPC, Node.js, Express.js

Datastores: PostgreSQL, MongoDB, MySQL, Redis

Infra: Linux, Docker, Nginx, systemd services, PM2, Git, SSH

Cloud: DigitalOcean (Droplets), AWS S3

Fundamentals: Data Structures and Algorithms, System Design, Low Level Design

EDUCATION

B. Tech. Computer Science and Engineering — JH, IN | 2022
BIT Sindri | 9.24 CGPA

PROJECTS

PAYMENT MICROSERVICES APP — Microservices, MySQL, gRPC, Golang

- Reference microservices-based payment system with clear service boundaries: auth, money movement, email, and ledger
- Designed service-to-service communication using **gRPC** and MySQL-backed workflows
- Deployed on local **Kubernetes (Minikube)** using manifests and integrated **Kafka** for asynchronous messaging workflows

OP STACK WITHDRAWALS INDEXER — Optimism Stack, Blockchain, PostgreSQL

- Two services (**Indexer** + **API**) with a shared PostgreSQL database, designed for horizontal scalability
- Failure-safe indexing with retries/backoff, idempotent SQL writes to prevent duplicates, and graceful shutdown
- Used interfaces to decouple core logic from chain/DB implementations for testability and maintainability

TIC TAC TOE BOLT — TypeScript, ReactJS

- An extension of the classic Tic-Tac-Toe, with an additional constraint: max 3 active symbols per player

COMMUNITY CONTRIBUTIONS

- Open source (**MeshJS**, TypeScript): refactored transaction metadata handling and fixed metadata-loss bug (PR 416); fixed HD wallet account bug (PR 396); reported wallet ownership verification issue (Issue 345).
