SUMMARY

Web3 backend engineer focused on **reliability**, **data integrity**, and **scalability**
Built and owned backend systems, APIs, and data pipelines in **Node.js**, **Golang**, and **Python**, with production tooling
Built Ethereum smart contracts in **Solidity**, and on-chain/off-chain **integration layers**
Strong in **correctness-first pipelines (validation, idempotency, safe retries)** and **clear service boundaries**
Skilled at **collaborating across teams** and **leading feature development from the ground up**

WORK EXPERIENCE

LCX | Software Development Engineer — Gurugram, IN | Aug 2022 - Mar 2026

- Led the backend development of Tiamonds (now TotoFinance), an NFT marketplace
- Built **concurrency-aware REST APIs** and **asynchronous pipelines** in Node.js
- Collaborated with the frontend and design teams for feature integration and maintained backend deployments
- Researched and implemented **server-signed message flows** for ERC-721 marketplace operations to reduce on-chain overhead (**cut gas costs by approximately 50%**) and to enable efficient workflows for new features
- Built a withdrawals indexer service for **OP Stack Layer 2 blockchains** with **failure-resilient retries** and **idempotent database writes**
- Built an **automation pipeline** that syncs approximately 80,000 CSV rows into MongoDB for over 20,000 assets with safe retries
- Built **retry-safe blockchain monitoring services** to synchronize and update database based on blockchain events
- Designed NFT marketplace smart contracts supporting **server-signed messages**, and custom tokens, including the upgradeable LCX Token 2.0,live on Ethereum mainnet

CAREER BREAK — Mar 2026 - Present

- Upskilling to transition into high-scale web2-heavy backend roles
- Deepening practical knowledge of **microservices development and scalability**

SKILLS

Languages: JavaScript, TypeScript, Go (Golang), Python, SQL, Solidity

Backend: Node.js, Express.js, REST APIs, gRPC, Kafka, Microservices

Datastores: MySQL, MongoDB, PostgreSQL, Redis

Web3 Tools & Frameworks: ethers.js, web3.js, Foundry, Hardhat, Truffle, Etherscan

Web3 Standards & Concepts: ERC-20, ERC-721, ERC-1155, EIP-712, Proxies and Upgrade Patterns

DevOps & Infra: Git, Linux, Docker, Kubernetes, CI/CD (GitHub Actions), SSH, Nginx, systemd, PM2

Cloud: AWS (EC2, S3), DigitalOcean (Droplets), Cloudflare

AI Tools: Claude Code, Cursor, Ollama, Qwen

Fundamentals: Data Structures and Algorithms, System Design

EDUCATION

B. Tech. Computer Science and Engineering — JH, IN | 2022
BIT Sindri | 9.24 CGPA

PROJECTS

PAYMENT MICROSERVICES APP — Node.js, TypeScript, MySQL, gRPC, Kafka, Kubernetes

- Payment system built as **containerized microservices** (API gateway, auth, money movement, ledger, email), deployed on a Kubernetes cluster
- Safe money transfers under concurrency and retries via **idempotency keys**, **atomic conditional balance updates**, **transactional database updates**, and **fixed row-lock ordering** to avoid deadlocks
- Asynchronous, fault-tolerant event delivery to downstream services using **Kafka**, the **transactional outbox pattern**, and an **idempotent ledger consumer**

- Typed service-to-service communication using **gRPC** (Protobuf)
- Unit and integration tests (**Vitest**, **Testcontainers**) covering concurrent transfers, idempotent retries and outbox delivery
- **CI** with **GitHub Actions**: per-service test and build pipeline

OP STACK WITHDRAWALS INDEXER Golang, Optimism Stack, Blockchain, PostgreSQL

- Withdrawals indexer / tracker for OP Stack-based Layer 2 blockchains
- Two services (**Indexer** + **API**) with a shared PostgreSQL database, designed for horizontal scalability
- **Failure-safe indexing** with **retries/backoff**, **idempotent SQL writes** to prevent duplicates, and graceful shutdown
- Used Go interfaces to decouple core logic from chain and database implementations for cleaner code organization
- **Live UI**: https://op-sepolia-bridge.d-bharti.dev

TIC TAC TOE BOLT TypeScript, React.js

- An extension of the classic Tic-Tac-Toe, with an additional constraint: max 3 active symbols per player; oldest moves are automatically reverted to maintain the limit

COMMUNITY CONTRIBUTIONS

- Smart Contract Security Audits
  - CodeHawks Profile: https://profiles.cyfrin.io/u/unitedcoolness26
  - 1 High finding, 2 Low findings - RAAC Audit
- Open-source contributions (**MeshJS**, TypeScript):
  - Refactored transaction metadata handling and fixed metadata-loss bug (PR 416)
  - Fixed HD wallet account bug (PR 396)
  - Reported wallet ownership verification issue (Issue 345)
- Technical articles on **Medium** (@dharmveerbharti): Off-chain Signature Workflow, Server-signed Messages in Web3
