SUMMARY

Backend engineer focused on reliability and data integrity

Built and owned backend + data systems in NodeJS, Golang, and Python, with production tooling (Docker, systemd, PM2)

Strong in correctness-first pipelines (validation, idempotency, safe retries) and clear service boundaries

Skilled at collaborating across teams and leading feature development from the ground up

WORK EXPERIENCE

LCX | SOFTWARE DEVELOPMENT ENGINEER

Gurugram, IN | Aug 2022 - Feb 2026

- Led the backend development of Tiamonds (now TotoFinance), an NFT marketplace
- Built concurrency-aware REST APIs and asynchronous pipelines in NodeJS (JavaScript) and collaborated with the frontend and design teams for feature integration and maintained staging deployments
- Built Golang-based OP Stack Withdrawals indexer service with failure-resilient retries and idempotent database writes (PostgreSQL)
- Implemented server-signed message flows for ERC-721 marketplace operations to reduce on-chain overhead (cut gas costs by approximately 50%) and to enable efficient workflows for new features
- Built a Python automation pipeline (NumPy/Pandas) syncing approximately 80,000 CSV rows into MongoDB for over 20,000 assets with safe retries, and preparing images with Pillow and uploading them to AWS S3
- Conducted research on and deployed Golang services for OP Stack layer 2 blockchain development
- Designed LCX Token 2.0 smart contract (ERC-20, upgradeable, with custom features)

SKILLS

Languages: Go (Golang), JavaScript, TypeScript, Python, SQL, Solidity

Backend: REST APIs, gRPC, NodeJS

Datastores: PostgreSQL, MongoDB, MySQL, Redis

Infra: Docker, Nginx, systemd services, PM2, Git, SSH

Cloud: DigitalOcean (Droplets), AWS S3

Fundamentals: Data Structures and Algorithms, System Design, Low Level Design

EDUCATION

B. Tech. Computer Science and Engineering

JH, IN | 2022

BIT Sindri | 9.24 CGPA

PROJECTS

OP STACK WITHDRAWALS INDEXER

GOLANG, OPTIMISM STACK, BLOCKCHAIN, POSTGRES SQL

- Two services (**Indexer** + **API**) with a shared PostgreSQL database, designed for horizontal scalability
- Failure-safe indexing with retries/backoff, idempotent SQL writes to prevent duplicates, and graceful shutdown
- Used interfaces to decouple core logic from chain/DB implementations for testability and maintainability
- **Live UI:** <https://op-sepolia-bridge.d-bharti.dev> - built with Lovable and Cursor

GO PAYMENT APP

GOLANG, MICROSERVICES, MYSQL, gRPC

- Reference microservices-based payment system with clear service boundaries: auth, money movement, email, and ledger
- Designed service-to-service communication using **gRPC** and MySQL-backed workflows
- Deployed on local **Kubernetes (Minikube)** using manifests and integrated **Kafka** for asynchronous messaging workflows

- An extension of the classic Tic-Tac-Toe, with an additional constraint: max 3 active symbols per player

COMMUNITY CONTRIBUTIONS

- Open source (**MeshJS**, TypeScript): refactored transaction metadata handling and fixed metadata-loss bug ([PR 416](#)); fixed HD wallet account bug ([PR 396](#)); reported wallet ownership verification issue ([Issue 345](#)).
- Technical articles, available on **Medium**: [@dharmveerbharti](#)
- **Smart Contract Security Audits**
 - CodeHawks Profile: <https://profiles.cyfrin.io/u/unitedcoolness26>
 - 1 High finding, 2 Low findings - [RAAC Audit](#)
