SUMMARY

Backend engineer focused on **reliability**, **data integrity**, and **scalability**

Built and owned backend systems, APIs, and data pipelines in Node.js, Golang, and Python, with production tooling

Strong in **correctness-first pipelines** (**validation**, **idempotency**, **safe retries**) and **clear service boundaries**

Skilled at **collaborating across teams** and **leading feature development** from the ground up

WORK EXPERIENCE

LCX | SOFTWARE DEVELOPMENT ENGINEER

Gurugram, IN | Aug 2022 - Mar 2026

- Led the backend development of Tiamonds (now TotoFinance), an NFT marketplace
- Built **concurrency-aware REST APIs** and **asynchronous pipelines** in Node.js
- Collaborated with the frontend and design teams for feature integration and maintained backend deployments
- Researched and implemented **server-signed message flows** for ERC-721 marketplace operations to reduce on-chain overhead (**cut gas costs by approximately 50%**) and to enable efficient workflows for new features
- Built an **automation pipeline** that syncs approximately 80,000 CSV rows into MongoDB for over 20,000 assets with safe retries
- Built **retry-safe blockchain monitoring services** to synchronize and update the database based on blockchain events
- Built an OP Stack Withdrawals indexer service with **failure-resilient retries** and **idempotent database writes**
- Designed NFT marketplace smart contracts supporting **server-signed messages**, and custom ERC-20 tokens

CAREER BREAK

Mar 2026 - Present

- Upskilling to transition into web2-based roles
- Deepening practical knowledge of **microservices development and scalability**, and experimenting with AI tools like **Claude Code** and **local LLMs (Ollama, Qwen)**

SKILLS

Languages: JavaScript, TypeScript, Go (Golang), Python, SQL, Solidity

Backend: Node.js, Express.js, REST APIs, gRPC, Kafka, Microservices

Datastores: MySQL, MongoDB, PostgreSQL, Redis

Infra: Linux, Docker, Kubernetes, Nginx, systemd services, PM2, Git, SSH

Cloud: DigitalOcean (Droplets), AWS S3, Cloudflare

Fundamentals: Data Structures and Algorithms, System Design

EDUCATION

B. Tech. Computer Science and Engineering

JH, IN | 2022

BIT Sindri | 9.24 CGPA

PROJECTS

PAYMENT MICROSERVICES APP

NODE.JS, TYPESCRIPT, MYSQL, GRPC, KAFKA, KUBERNETES

- Payment system built as containerized microservices (API gateway, auth, money movement, ledger, email), deployed on a Kubernetes cluster
- Safe money transfers under concurrency and retries via **idempotency keys**, **atomic conditional balance updates**, **transactional database updates**, and **fixed row-lock ordering** to avoid deadlocks
- Asynchronous, fault-tolerant event delivery to downstream services using **Kafka**, the **transactional outbox pattern**, and an **idempotent ledger consumer**

- Typed service-to-service communication using **gRPC** (Protobuf)

OP STACK WITHDRAWALS INDEXER

GOLANG, OPTIMISM STACK, BLOCKCHAIN, POSTGRESQL

- Withdrawals indexer / tracker for OP Stack-based Layer 2 blockchains
- Two services (**Indexer** + **API**) with a shared PostgreSQL database, designed for horizontal scalability
- **Failure-safe indexing** with **retries/backoff**, **idempotent SQL writes** to prevent duplicates, and graceful shutdown
- Used Go interfaces to decouple core logic from chain and database implementations for cleaner code organization

TIC TAC TOE BOLT

TYPESCRIPT, REACT.JS

- An extension of the classic Tic-Tac-Toe, with an additional constraint: max 3 active symbols per player; oldest moves are automatically reverted to maintain the limit

COMMUNITY CONTRIBUTIONS

- Open-source contributions (**MeshJS**, TypeScript): refactored transaction metadata handling and fixed metadata-loss bug ([PR 416](#)); fixed HD wallet account bug ([PR 396](#)); reported wallet ownership verification issue ([Issue 345](#))
- Technical articles, available on **Medium**: [@dharmveerbharti](#)
- **Smart Contract Security Audits**
 - CodeHawks Profile: <https://profiles.cyfrin.io/u/unitedcoolness26>
 - 1 High finding, 2 Low findings - [RAAC Audit](#)
