SUMMARY

Backend engineer focused on reliability and data integrity.

Built and operated backend + data systems in Golang, NodeJS, and Python, with production tooling (Docker, systemd, PM2).

Strong in correctness-first pipelines (validation, deduplication, reconciliation) and designing clear service boundaries.

WORK EXPERIENCE

LCX | SOFTWARE DEVELOPMENT ENGINEER

Gurugram, IN | Aug 2022 - Feb 2026

- Conducted research and deployment of Golang services of OP Stack for blockchain layer 2 development
- Built Golang based OP Stack Withdrawals indexer service with failure-resilient retries, idempotent database writes (PostgreSQL) and clear service boundaries
- Owned and maintained the backend of Tiamonds (now TotoFinance), an NFT marketplace, including NodeJS and Python services, staging deployments, and integrations
- Designed correctness-first backend workflows using retries, and idempotent and concurrent-safe operations to maintain system integrity and resiliency
- Built concurrency-aware APIs and collaborated with frontend team for REST API integrations
- Built a Python automation pipeline (NumPy/Pandas) syncing approximately 80,000 CSV rows into MongoDB for over 20,000 assets with safe retries, and preparing images with Pillow and uploading them to AWS S3
- Implemented server-signed message flows for ERC-721 marketplace operations to reduce on-chain overhead (cut gas costs by approximately 50%) and enable efficient workflows for new features

SKILLS

Languages: Go (Golang), Solidity, SQL, JavaScript, TypeScript, Python

Backend: REST APIs, gRPC, NodeJS

Datastores: PostgreSQL, MongoDB, MySQL, Redis

Infra: Docker, Nginx, systemd services, PM2, Git, SSH

Cloud: DigitalOcean (Droplets), AWS S3

EDUCATION

B. Tech. Computer Science and Engineering
BIT Sindri | 9.24 CGPA

JH, IN | 2022

PROJECTS

OP STACK WITHDRAWALS INDEXER

GOLANG, OPTIMISM STACK, BLOCKCHAIN, POSTGRESQL

- Two services (**Indexer** + **API**) with a shared PostgreSQL database, designed for horizontal scalability.
- Failure-safe indexing with retries/backoff, idempotent SQL writes to prevent duplicates, and graceful shutdown.
- Used interfaces to decouple core logic from chain/DB implementations for testability and maintainability.
- **Live UI:** <https://op-sepolia-bridge.d-bharti.dev> - built with Lovable and Cursor.

GO PAYMENT APP

GOLANG, MICROSERVICES, MYSQL, gRPC

- Reference microservices-based payment system with clear service boundaries: auth, money movement, email, and ledger.
- Designed service-to-service communication using **gRPC** and MySQL-backed workflows.
- Deployed on local **Kubernetes (Minikube)** using manifests and integrated **Kafka** for asynchronous messaging workflows.

- An extension of the classic Tic-Tac-Toe, with an additional constraint: max 3 active symbols per player.

COMMUNITY CONTRIBUTIONS

- Open source (**MeshJS**, TypeScript): refactored transaction metadata handling and fixed metadata-loss bug ([PR 416](#)); fixed HD wallet account bug ([PR 396](#)); reported wallet ownership verification issue ([Issue 345](#)).
- Technical articles, available on **Medium**: [@dharmveerbharti](#)
